

QUICK SET UP GUIDE 2055A

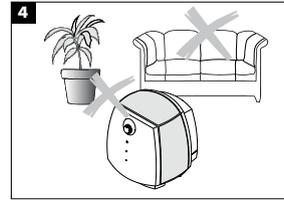

1 Remove **all** cardboard pieces from the disc pack.

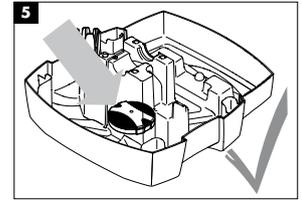

2 Finding the ideal location for your unit: Do not place the humidifier directly next to a heating or air vent.

3 The unit should be placed on a dry, level surface. Keep it away from walls, doors or windows.

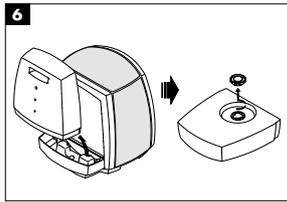

4 The unit should not be placed too close to plants or other objects. Keep a distance of at least 20 inches (50cm).

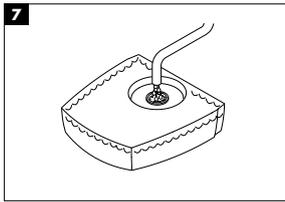

5 **Water Quality Maintenance**
The Hydro Cell keeps the humidifiers operating at their highest level between recommended cleanings*. Good for approximately one to two months, depending on the water quality, the Hydro Cell ensures the humidifier's functionality while providing fresh humidification performance.

* Refer to the user manual for proper cleaning instructions.

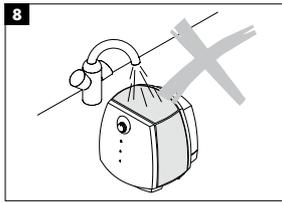

FILL THE TANK WITH FRESH COLD WATER

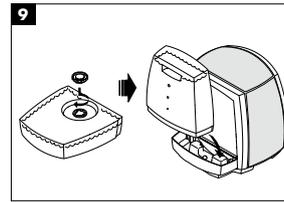

6 Take off the water tank cap to fill the tank with water.

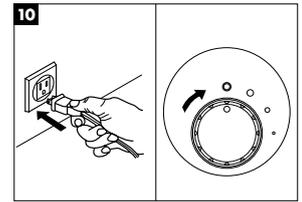

7 Fill the tank with clean, cold water from the tap.

8 Do not pour water directly into the appliance. Use the water tank only.

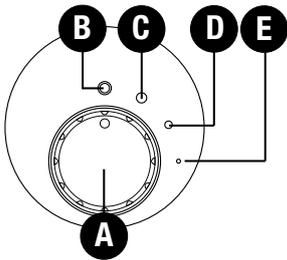

9 Close the cap of the water tank securely, place the water tank onto the base. The water is now running from the tank into the base. The red empty indicator light may stay illuminated for some seconds until the base is filled with water.

10 Insert the plug into the socket and switch on the appliance using the On/Off dial. The green light comes on.

QUICK OPERATION DESCRIPTION 2055A

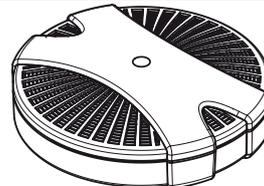

- A Rotary dial On/Off
- B Position Off
- C Normal mode
- D Night mode
- E Operating light and Automatic Shut-Off «Tank empty» Indicator

WATER QUALITY MAINTENANCE WITH HYDRO CELL

Water Quality Maintenance

The Hydro Cell keeps humidifiers operating at their highest level between recommended cleanings*. Good for approximately one to two months, depending on the water quality, the Hydro Cell ensures the humidifier's functionality while providing fresh humidification performance.

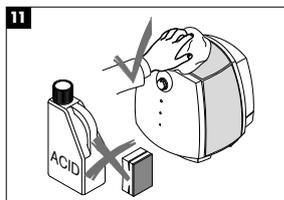

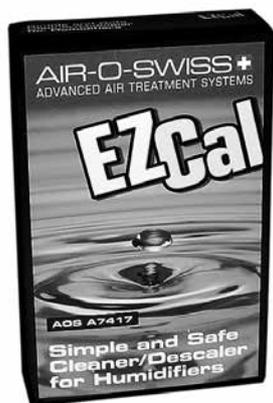

* Refer to the user manual for proper cleaning instructions.

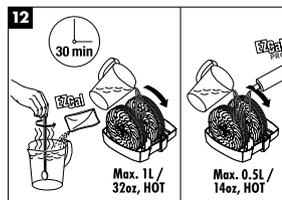

DO NOT DISCARD! Save for future reference.

Please read the manual or check our website www.airoswiss.net for further information.

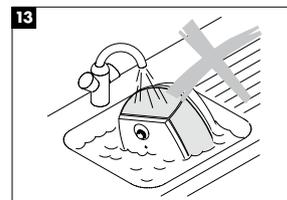

RECOMMENDED TO CLEAN WITH EZCal AND EZCal PRO

Switch off the appliance and unplug it from the socket before cleaning it. Clean the water tank and the base regularly. Use water only, no detergents.

For best results, use EZCal and EZCal Pro cleaning agents to remove deposits from the humidifier base. Do NOT run the unit when using EZCal and EZCal Pro. This can cause damage to the appliance and voids the warranty.

Do not submerge the main body in water! Thoroughly rinse the base with tap water and make sure no EZCal and EZCal Pro residue remains in the base!

There is a sample of EZCal included in the packaging of your humidifier!

Only use 1 packet for 32oz of water. Do not change the ratio. Thoroughly rinse the base with tap water and make sure no EZCal residue remains in the base. Instructions for use are on the packet. Please note: EZCal and EZCal Pro are the only recommended cleaning and descaling solution. Do NOT use any other cleaning solutions since it can damage the product. Any use of cleaning solutions apart from EZCal and EZCal Pro will void the warranty.

EZCal and EZCal Pro descaling agents are available at selected retail stores and online at www.airoswiss.net.

What is EZCal and EZCal Pro?

EZCal and EZCal Pro are cleaning and descaling agents recommended for all humidifiers. The decalcification ingredients clean the mineral build-up in the humidifier base.

TROUBLE SHOOTING

If there is no water left in my water tank, for how many hours will the water in the base last?

- An exact answer cannot be given for this as there are many factors that depend on how long the water will last for. It all depends on the size of the room, if it is very dry, among other things to know how quickly water will evaporate into the air. If you notice that there is no water left in the water tank, it is always a good idea to refill the tank to have extra water available.

Red LED light is illuminated – what does it mean?

- The red LED light on the appliance shows you when the unit should be refilled with water. If the water level falls below the minimum level, the appliance automatically switches off. The red LED appears on the display. When water is added, the red LED changes to green and the appliance continues operating. Please note: When lifting the upper part off the housing, the appliance also switches off. In this case, the red LED will also appear on the display. Only when the upper part is replaced on the base does the red LED (E) disappear and the appliance resumes operation.

I fill the water tank, and when I place it back on the unit all of the water goes into the base. Why is that?

- Water is needed in the base of the unit for the removal of particles from the air, and for the humidification of the air. The first time the tank is filled up and placed on the unit, all of the water will go into the base of the unit. The water tank acts as a reserve, and may be filled up a second time to have extra water available.

Is it ok to put my humidifying discs in the dishwasher?

- The manufacturer of this appliance does NOT recommend it. The discs can only be placed in a dishwasher where the temperature is no greater than 131 °F / 55 °C. If the temperature is any hotter than this, the discs will melt. Place

the plates in a sink filled with warm water and white vinegar or EZCal and EZCal Pro and either let them soak or spin the plates in this solution. Or, add white vinegar or EZCal and EZCal Pro to the water in the base of the unit and let the unit run for an hour to clean the plates. It is good to have calcium deposits built up on the plates as it will capture more particles from the air and add more moisture to the air. For troubleshooting, see chapter «Troubleshooting».

Humidity level is not changing or does not reach the desired humidity level

- If the water tank needs refilling more than once per day, the unit is working properly and the climatic condition in the room has an influence on the humidity.

Reasons for low humidity level:

- air circulation is very high (air is fully exchanged several times per day – the humidifier needs to start its work from scratch)
- insulation of home (see air circulation)
- open space with high ceilings (not only the footage of the room counts but also the height) – high-rise buildings require more humidification.
- open windows – works similar to air circulation (if it is very cold outside don't open the window more than 2 times per day for 3 minutes)
- big difference between outside temperature and inside temperature – the colder the air the less moisture it is capable to hold and the more the air is heated up the lower is the percentage of relative humidity (= the amount of water vapor in the air, compared to the amount the air could hold if it was totally saturated)
- position of the unit – if it is placed close to a door, window or air vent. This increases the air circulation.

Can this unit be used all year round?

- Yes, the unit can be used all year round. The unit produces relative humidity which means that the air will only take as much moisture as it can hold. The unit will not over-humidify the air.

ACCESSORIES

What is the Hydro Cell and how long is it good for?

- The Hydro Cell keeps humidifiers operating at their highest level between recommended cleaning*. Good for approximately one to two months, depending on the water quality, the Hydro Cell ensures the humidifier's functionality while providing fresh humidification performance. It needs to be replaced every one to two months**.

* Refer to the user manual for proper cleaning instructions.
** Depending on the water quality.

Placement of the Hydro Cell

- Please see the instruction manual for detailed placement of the Hydro Cell.

DO NOT DISCARD! Save for future reference.

Please read the manual or check our website www.airoswiss.net for further information.
