

Little Dreamer

by Moonlight Slumber®

Safe, healthy, affordable

The best in its class for your child's comfort and safety

SAFE. Industry and Federal standards for crib mattresses are surprisingly lax. However, the safety of little dreamers everywhere is the primary goal of Moonlight Slumber®. That is why our mattresses exceed all current and planned safety standards. Each Little Dreamer® mattress comes standard with an internal fire resistant barrier—exceeding the Federal Flammability Standard of FR, fire retardant. Free of chemical treatment, we offer unparalleled safety and peace of mind for the most discerning parents.

HEALTHY. Developed from a line of proven health care mattresses used in hospitals and nurseries nationwide, Little Dreamer® mattresses offer unique health features.

- **Antimicrobial.** Each Little Dreamer® mattress is antimicrobial—treated inside and out to safely and effectively prevent bacteria growth for the lifetime of your mattress.
- **No taped edges.** The decorative tape, or roll, that is standard of typical mattress seams actually prevents fluid run-off by absorbing excess body fluids. The damp cording then becomes host to bacteria. Little Dreamer® mattresses eliminate taped edges and, therefore, eliminate the unintended parasopic guests.
- **Dropped side seams.** Instead of designing mattresses with seams on the top of the sleep surface, allowing excess fluids to sit on needle holes, Little Dreamer® mattresses have dropped the seams to the sides to prevent fluid build up and bypass possible seepage.
