

Starlight Support[™]

by Moonlight Slumber[™]

SAFE.

- Each Starlight Support mattress comes standard with an internal Fire Barrier making it open flame resistant.
- Squared edges promote a tight fit in the crib to prevent gaps between the mattress and crib wall, reducing sheet slippage and making it more difficult for toddlers to get a good grip on the sheet.
- Firm side rails. Starlight Support mattresses are bordered with a high-density foam side rail which gently encourages your child to sleep in the center of the crib where the best ventilation and comfort can be found.

Designed with advanced health, safety and comfort standards, the **Starlight Support** mattress from **Moonlight Slumber** is a premium mattress for the most discerning of parents. Completely antimicrobial with welded seams, premium ticking, cornered edges and two levels of firmness, each **Starlight Support** mattress comes standard with an internal Fire Barrier making it open flame resistant. The Starlight Support mattress line exceeds all current and planned Federal standards for fire safety. Quite simply the **Starlight Support** mattress is the best mattress available for your little dreamer.

HEALTHY.

- Starlight Support mattresses are antimicrobial—treated inside and out to prevent bacteria growth for the lifetime of your mattress.
- Seams “welded” with an ultrasonic radio frequency means there are no needle holes in your Baby’s mattress cover keeping out dust mites and germs.
- Starlight Support mattresses come standard with a premium ticking that is stain resistant, fire-resistant, waterproof, and completely antiallergenic, antimicrobial, and hypoallergenic.
- Our premium ticking, standard on all mattresses, is so supple that you will not need a mattress pad. Ridding your crib of a mattress pad is yet another way to eliminate dust mites.
- No taped edges. The decorative tape, or roll, that is standard of typical mattress seams actually prevents fluid run-off by absorbing excess body fluids. The damp cording then becomes host to bacteria. Starlight Support’s welded seams eliminate the need for taped edges and, therefore, eliminate the unintended parascopeic guests.

COMFORTABLE.

Each Starlight Support crib mattress is equipped with two levels of firmness—one per side. There is an extra firm side for infants and a firm side for older babies and toddlers.

Our premium, woven four-way stretch ticking resists cracking, warms under your baby, and cleans beautifully. Simply damp sponge and your mattress is as good as new.

Whether you choose the high-density foam or the more traditional foam encapsulated innerspring mattress, you are assured a safe, healthy, comfortable mattress for your baby.

ELEGANT.

The smooth lines and six-inch depth of the Starlight Support mattresses pull your sheet taut for a beautifully made bed that shows your bedding to the best of its advantage.

The removal of the decorative taping or edging that is found on traditional mattresses means that there is no ridge to detract from your bedding’s appearance.
